

Changes on the Avery Dennison Signage Portfolio Lead-free pigments

The European Union has evaluated lead chromate under its Registration, Evaluation and Authorization of Chemicals (REACH) programme. As a result, from May 21, 2015, the manufacture of materials containing lead chromates will no longer be permitted (although the sale of any remaining stock containing these pigments will still be permitted).

Avery Dennison has been working closely with its suppliers of colour pigments to identify and qualify alternative solutions based on lead-free pigments. The ranges affected by the changes are 500 Event Film, 700 Premium Film, 800 Premium Cast, 900 Super Cast, 5500 QM Translucent Film, 4500 TF Translucent Film.

In this guide you will find a listing of all the product ranges affected, colour by colour. We have marked the status of each code with symbols, as follows:

- ✓ **No or negligible change:** Retain the same product code and name if differences in colour and/or opacity have been judged to be within standard allowed production deviations.
- ⚡ **Product Impacted:** Keep the product name but with a new code where the differences in colour and/or opacity have been judged to be noticeable but still acceptable .
- ✗ **Discontinued:** Discontinue products where differences in colour and/or opacity are not within acceptable limits.
- ★ **New product:** Introduce brand new colours based on the latest market trends.
- ~ **Not affected by lead:** Most of our products have not been affected, since the colour pigments did not contain lead.
